Gilat's Spacenet Introduces Enhanced Wi-Fi Solutions Suite

- Tiered Wi-Fi Services Provide Retailers an Integrated Approach to Wi-Fi Throughout the Store and Across the Enterprise –

Petah Tikva, Israel – July 1, 2013 – Gilat Satellite Networks Ltd. (NASDAQ: GILT), a worldwide leader in satellite networking technology, solutions and services, today announced that its wholly owned subsidiary Spacenet Inc.®, a leading provider of managed network and data security services has introduced an enhanced suite of integrated Wi-Fi services. Spacenet's Tiered Wi-Fi services provide a centralized approach to in-store Wi-Fi enabling the retailer to select the level of services needed for their specific retail environment.

From basic planning and installation to comprehensive management, monitoring, maintenance and security services, Spacenet Tiered Wi-Fi services help retailers provide fast, reliable, accessible and secure Wi-Fi services throughout each store. This integrated approach enables the retailer to benefit from a full-featured Wi-Fi service while providing its customers with an enhanced Guest Wi-Fi user experience that is uniform across all stores.

"Analysts estimate that Wi-Fi will account for nearly half of total network access by 2015 so it's crucial that retailers develop an integrated and secure Wi-Fi strategy," said Spacenet CEO Glenn Katz. "Wi-Fi helps retailers run stores more efficiently and with greater flexibility. Today consumers expect Wi-Fi access and look to retailers to empower their mobile devices to help them make easier and smarter purchases.

"As a managed network services provider our job is to make Wi-Fi implementation and management an integrated part of the retailer's overall network strategy, while maintaining network security. We've deployed and integrated thousands of Wi-Fi nodes for our retail customers, and one thing is abundantly clear: Providing a single point-of-contact for the WAN, LAN and WLAN allows the retailer to provide its customers with a secure, reliable and consistent guest Wi-Fi experience. This intelligently integrated approach takes the worry out of Wi-Fi deployment," concluded Mr. Katz.

Spacenet Tiered Wi-Fi services are available in the following levels:

- **Spacenet Rogue Wi-Fi Detection Services.** PCI DSS standards include requirements for securing retailer-provided wireless technologies. However, PCI compliance also requires retailers NOT operating Wi-Fi services to periodically scan their networks for rogue Wi-Fi devices that may have been surreptitiously deployed within their stores. Whether or not the retailer provides guest Wi-Fi, Spacenet Rogue Wi-Fi Detection services provide the tools and techniques to detect and report rogue Wi-Fi devices on the network to support PCI compliance.

Press Release (cont.)

- **Spacenet Wi-Fi Professional Services** include installation of access points to ensure secure access, enhanced coverage and a more rewarding guest Wi-Fi experience, configuration management as well as ongoing monitoring of the service. As part of the on-site installation, a heat map detailing optimal coverage throughout the store is created.
- **Spacenet Wi-Fi Premium Services** include all the features of Rogue Wi-Fi Detection services and Wi-Fi Professional Services, and adds Wi-Fi deployment pre-planning, monitoring of surrounding access points, trouble alerts and PCI Reporting.
- **Spacenet's Data Analytics Package** is optional and provides an in-depth view of shopper metrics. The Data Analytics package bridges the gap between retailer knowledge of an on-line customer and the lack of knowledge of a traditional "brick and mortar" customer by monitoring inside and outside traffic levels (opportunity), engagement, bounce rate, loyalty and other typical customer behavior metrics. By adding this option, retailers can augment the data they are already collecting from their e-commerce and mobile platforms for a more complete view of omni-channel shopping behavior.

Spacenet Tiered Wi-Fi services are available immediately as an add-on service to existing customers, and as part of an integrated managed network service platform for small, medium and large enterprises. For more information on Spacenet Tiered Wi-Fi Services, visit www.spacenet.com or call 866.480.2263.

About Spacenet®

Since 1981, Spacenet Inc. has designed, implemented and managed some of the largest communications networks for US-based business, industrial and government customers. Spacenet has a longstanding tradition of industry leadership and innovation, and today manages communications at more than 160,000 locations for customers including many Fortune 500 companies and major government agencies. Headquartered in McLean, Virginia, Spacenet is a wholly owned subsidiary of Gilat Satellite Networks Ltd. (Nasdaq: GILT). Visit Spacenet at <http://www.spacenet.com>

About Gilat Satellite Networks Ltd.

Gilat Satellite Networks Ltd (NASDAQ, TASE: GILT) is a leading provider of products and services for satellite-based broadband communications. Gilat develops and markets a wide range of high-performance satellite ground segment equipment and VSATs, with an increasing focus on the consumer and Ka-band market. In addition, Gilat enables mobile SOTM (Satellite-on-the-Move) solutions providing low-profile antennas, next generation solid-state power amplifiers and modems. Gilat also provides managed network and satellite-based services for rural telephony and Internet access via its subsidiaries in the United States, Peru and Colombia.

Press Release (cont.)

With over 25 years of experience, and over a million products shipped to more than 85 countries, Gilat has provided enterprises, service providers and operators with efficient and reliable satellite-based connectivity solutions, including cellular backhaul, banking, retail, e-government and rural communication networks. Gilat also enables leading defense, public security and news organizations to implement advanced, on-the-move tactical communications on board their land, air and sea fleets using Gilat's high-performance SOTM solutions.
